base 1.1 Chapter 1 Requirement Analysis 1.1.1 Functional Requirements During this project it is clearly understand whether the relationship has build up upon the pet adoption centre.

(100.0%)

Initially concluded that the entities, attributes and the relationships where the database of pet adoption which is deals with the adopters and also the pet availability . (100.0%)

here used the conceptual database model while these process it has converted the conceptual representation into the logical structure of database through the normalization process. (100.0%)

In these database it was used the MySql to represent the physical structure of the database on Pet_-Adoption. (100.0%)

First identify the user under the categories as adopters, admin, employees as well as the personal details of them. (100.0%)

As the main relationship is occurred with the users with the pet which are under adopted or they has still live in this centre as well as including with the details of the pets availability. (100.0%)

Considering pet entity it mainly focused on their health issues from that there has stored data as vet visit details , as well as the medical history of those animals. (100.0%)

When considering about the pet adoption centre it has direct relationship with the users and transactions whom are adopters, or the donators it will be transacted with. (100.0%)

As well as it includes the financial also it provides that it has mainly income of it. (100.0%)

Considering about the user there is a entity named shelter where it was managed or worked employees in the adoption centres where they has spread over the country. (100.0%)

It can be a user as an adopter or willing to be an adopter so that there is an opportunity to showcase the abilities of their pets or can watch the abilities of the pets and can be get a dicision of t hink of the adoption.

(100.0%)

As an adopter there is a main service provide here that is can be get veterinary services under the various vets supervision. (100.0%)

1.1.2 Data Requirements Considering about these database it can be identified as basically 8 entities and that was consistence with 2 weak entities also. (100.0%)

Others are named as strong entities. (100.0%)

All the entities and the attributes of the database is provided below. (100.0%)
Strong entities and attributes 1. (100.0%)
User User_ID Name Contact_No Email Adress Reg_Date 2. (100.0%)
PET Pet_ID User_ID Pet_Name Pet_Type Age Date of birth Breed Availability 3. (100.0%)
Transaction Trans_ID User_ID Vet_ID Trans_Date Amount Trans_Type 4. (100.0%)
Financial Amount Trans_ID User_ID 5. (100.0%)
Event Event_ID Event_Name Event_Date User_ID Event_Location 6. (100.0%)
Vetanary Vet_ID Vet_Name User_ID V_Date Pet_ID Medicine 7. (100.0%)
Vet_Visit Vetvisit_ID Vet_ID Visit_Date Reason Vet_Name Pet_ID Weak entites and attributes 1. (100.0%)
Medical_History History_ID Pet_ID Pre_Date Details 2. (100.0%)
